

Penny Stocks

Penny stocks can be very risky

Penny stocks are low-priced shares of small companies not traded on an exchange or quoted on NASDAQ. Prices often are not available. Investors in penny stocks often are unable to sell stock back to the dealer that sold them the stock. Thus, you may lose your investment. Be cautious of newly issued penny stock. Your salesperson is not an impartial advisor but is paid to sell you the stock. Do not rely only on the salesperson, but seek outside advice before you buy any stock. If you have problems with a salesperson, contact the firm's compliance officer or the regulators listed below.

Information you should get

Before you buy penny stock, federal law requires your salesperson to tell you the "offer" and the "bid" on the stock, and the "compensation" the salesperson and the firm receive for the trade. The firm also must mail a confirmation of these prices to you after the trade. You will need this price information to determine what profit, if any, you will have when you sell your stock. The offer price is the wholesale price at which the dealer is willing to sell stock to other dealers. The bid price is the wholesale price at which the dealer is willing to buy the stock from other dealers. In its trade with you, the dealer may add a retail charge to these wholesale prices as compensation (called a "markup" or "markdown").

The difference between the bid and the offer price is the dealer's "spread." A spread that is large compared with the purchase price can make a resale of a stock very costly. To be profitable when you sell, the bid price of your stock must rise above the amount of this spread and the compensation charged by both your selling and purchasing dealers. If the dealer has no bid price, you may not be able to sell the stock after you buy it, and may lose your whole investment.

Further Information

The securities being sold to you have not been approved or disapproved by the Securities and Exchange Commission. Moreover, the Securities and Exchange Commission has not passed upon the fairness or the merits of this transaction nor upon the accuracy or adequacy of the information contained in any prospectus or any other information provided by an issuer or a broker or dealer.

Generally, penny stock is a security that:

- Is priced under five dollars.
- Is not traded on a national stock exchange or on NASDAQ (the NASD's automated quotation system for actively traded stocks).
- May be listed in the "pink sheets" or the NASD OTC Bulletin Board.
- Is issued by a company that has less than \$5 million in net tangible assets and has been in business less than three years, by a company that has under \$2 million in net tangible assets and has been in business for at least three years, or by a company that has revenues of \$6 million for 3 years.

1. Do not make a hurried investment decision. High-pressure sales techniques can be a warning sign of fraud. The salesperson is not an impartial advisor, but is paid for selling stock to you. The salesperson also does not have to watch your investment for you. Thus, you should think over the offer and seek outside advice. Check to see if the information given by the salesperson differs from other information you may have. Also, it is illegal for salespersons to promise that a stock will increase in value or is risk-free, or to guarantee against loss. If you think there is a problem, ask to speak with a compliance official at the firm, and, if necessary, any of the regulators referred to in this statement.

2. Study the company issuing the stock. Be wary of companies that have no operating history, few assets, or no defined business purpose. These may be sham or "shell" corporations. Read the prospectus for the company carefully before you invest. Some dealers fraudulently solicit investors' money to buy stock in sham companies, artificially inflate the stock prices, then cash in their profits before public investors can sell their stock.

3. Understand the risky nature of these stocks. You should be aware that you may lose part or all of your investment. Because of large dealer spreads, you will not be able to sell the stock immediately back to the dealer at the same price it sold the stock to you. In some cases, the stock may fall quickly in value. New companies, whose stock is sold in an "initial public offering," often are riskier investments. Try to find out if the shares the salesperson wants to sell you are part of such an offering. Your salesperson must give you a "prospectus" in an initial public offering, but the financial condition shown in the prospectus of new companies can change very quickly.

4. Know the brokerage firm and the salespeople with whom you are dealing. Because of the nature of the market for penny stock, you may have to rely solely on the original brokerage firm that sold you the stock for prices and to buy the stock back from you. Market Information The market for penny stocks. Penny stocks usually are not listed on an exchange or quoted on the NASDAQ system. Instead, they are traded between dealers on the telephone in the "over-the-counter" market. The NASD's OTC Bulletin Board also will contain information on some penny stocks. At times, however, price information for these stocks is not publicly available.

Market domination. In some cases, only one or two dealers, acting as "market makers," may be buying and selling a given stock. You should first ask if a firm is acting as a broker (your agent) or as a dealer. A dealer buys stock itself to fill your order or already owns the stock. A market maker is a dealer who holds itself out as ready to buy and sell stock on a regular basis. If the firm is a market maker, ask how many other market makers are dealing in the stock to see if the firm (or group of firms) dominates the market. When there are only one or two market makers, there is a risk that the dealer or group of dealers may control the market in that stock and set prices that are not based on competitive forces. In recent years, some market makers have created fraudulent markets in certain penny stocks, so that stock prices rose suddenly, but collapsed just as quickly, at a loss to investors.

Mark-ups and mark-downs. The actual price that the customer pays usually includes the mark-up or mark-down. Markups and markdowns are direct profits for the firm and its salespeople, so you should be aware of such amounts to assess the overall value of the trade. The "spread." The difference between the bid and offer price is the spread. Like a mark-up or mark-down, the spread is another source of profit for the brokerage firm and compensates the firm for the risk of owning the stock. A large spread can make a trade very expensive to an investor. For some penny stocks, the spread between the bid and offer may be a large part of the purchase price of the stock. Where the bid price is much lower than the offer price, the market value of the stock must rise substantially before the stock can be sold at a profit. Moreover, an investor may experience substantial losses if the stock must be sold immediately.

Example: If the bid is \$0.04 per share and the offer is \$0.10 per share, the spread (difference) is \$0.06, which appears to be a small amount. But you would lose \$0.06 on every share that you bought for \$0.10 if you had to sell that stock immediately to the same firm. If you had invested \$5,000 at the \$0.10 offer price, the market maker's repurchase price, at \$0.04 bid, would be only \$2,000; thus you would lose \$3,000, or more than half of your investment, if you decided to sell the stock. In addition, you would have to pay compensation (a "mark-up," "mark-down," or commission) to buy and sell the stock. In addition to the amount of the spread, the price of your stock must rise enough to make up for the compensation that the dealer charged you when it first sold you the stock. Then, when you want to resell the stock, a dealer again will charge compensation, in the form of a markdown. The dealer subtracts the markdown from the price of the stock when it buys the stock from you. Thus, to make a profit, the bid price of your stock must rise above the amount of the original spread, the markup, and the markdown. Primary offerings. Most penny stocks are sold to the public on an ongoing basis. However, dealers sometimes sell these stocks in initial public offerings. You should pay special attention to stocks of companies that have never been offered to the public before, because the market for these stocks is untested. Because the offering is on a first-time basis, there is generally no market information about the stock to help determine its value. The federal securities laws generally require broker-dealers to give investors a "prospectus," which contains information about the objectives, management, and financial condition of the issuer. In the absence of market information, investors should read the company's prospectus with special care to find out if the stocks are a good investment. However, the prospectus is only a description of the current condition of the company. The outlook of the start-up companies described in a prospectus often is very uncertain.
